

pSERG Transition from benzodiazepines to non-benzodiazepine anti-seizure medications

Load needed packages

This step loads packages with functions needed for analysis and that are not present in base R.

```
# install.packages("gmodels")
library(gmodels)

# install.packages("gdata")
library(gdata)

## gdata: read.xls support for 'XLS' (Excel 97-2004) files ENABLED.
##

## gdata: Unable to load perl libraries needed by read.xls()
## gdata: to support 'XLSX' (Excel 2007+) files.
##

## gdata: Run the function 'installXLSXsupport()'
## gdata: to automatically download and install the perl
## gdata: libraries needed to support Excel XLS and XLSX formats.
##

## Attaching package: 'gdata'

## The following object is masked from 'package:stats':
##
##      nobs

## The following object is masked from 'package:utils':
##
##      object.size

## The following object is masked from 'package:base':
##
##      startsWith

# install.packages("tableone")
library(tableone)

## Warning: package 'tableone' was built under R version 3.5.2

# install.packages("dplyr")
library(dplyr)
```

```
## Warning: package 'dplyr' was built under R version 3.5.2
##
## Attaching package: 'dplyr'
## The following objects are masked from 'package:gdata':
##
##   combine, first, last
## The following objects are masked from 'package:stats':
##
##   filter, lag
## The following objects are masked from 'package:base':
##
##   intersect, setdiff, setequal, union
# install.packages("survival")
library(survival)
# devtools::install_github('hadley/ggplot2')
library(ggplot2)
#install.packages("MASS")
library(MASS)
##
## Attaching package: 'MASS'
## The following object is masked from 'package:dplyr':
##
##   select
```

Load the database

Load the pSERG database into R.

```
# Load pSERG database
pSERG <- read.csv("pserg_2020.csv")
```

Clean the database

Keep only the population of interest and transform variables for analysis.

```
# Keep only patients who have refractory status epilepticus
dim(pSERG)
## [1] 760 1582
pSERG <- pSERG[which(pSERG$SE_GROUP == "refractory_case"), ]
dim(pSERG)
```

```

## [1] 502 1582

# Transform date of status epilepticus onset into date format
pSERG$DATESEIZURE <- as.Date(pSERG$DATESEIZURE, format = "%m/%d/%Y")

# Order by patient and then by date of status epilepticus
pSERG <- pSERG[order(pSERG$PATIENT_LABEL, pSERG$DATESEIZURE), ]

# Delete duplicate episodes from the same patient
pSERG <- pSERG[!duplicated(pSERG$PATIENT_LABEL), ]
dim(pSERG)

## [1] 443 1582

# Transform age into numeric
pSERG$G_T_STTS_PLPTCUS_EPISODE_YEARS <-
as.numeric(as.character(pSERG$G_T_STTS_PLPTCUS_EPISODE_YEARS))
